

15 Appendix 5. Working Party scope

*Joint BSAC/HIS Working Party on multi-drug-resistant Gram-negative bacteria:
a proposal for the Councils to consider*

1. Guideline title
Prevention and control of multi-drug-resistant Gram-negative bacteria: recommendations from a Joint Working Party

1.1 Short title

Multi-drug-resistant Gram-negative bacteria

2. The remit

To examine and make recommendations both for treatment and prevention of transmission of MDR Gram-negative infections, resulting in the publication of guidelines on:

- current epidemiology and infection control issues; and
- therapeutic issues and antibiotic guidance for treating infections caused by MDR Gram-negative bacteria.

3. Clinical need for the guideline

3.1 Epidemiology

- There are a rising number of MDR Gram-negative infections in critical care units, and the dual problems of finding an appropriate antibiotic and preventing spread.
- Antimicrobial Resistance and Hospital Acquired Infection Advisory Committee (ARHAI) has recently produced brief guidelines on infection control and treatment options for these infections.
- There was significant interest attracted by the May 2010 BSAC conference examining the lack of development of new antibiotics effective against Gram-negative bacteria.
- The recent outbreaks of Gram-negative infections related to infrared taps in neonatal units causing cross-infections and deaths led to the Department of Health's decision to review advice on tap design.
- The Department of Health has recognized that whilst control of meticillin-resistant *S. aureus* and *C. difficile* has been relatively successful, Gram-negative infections have continued to increase. Consequent to this is the surveillance subcommittee of ARHAI recommendation that *E. coli* bacteraemia be included in mandatory reporting from April 2011; a recommendation that has received ministerial approval.
- Outbreaks of MDR *Acinetobacter* spp. have been very troublesome in critical care units from time to time, but control measures appear to be poorly effective.

3.2 Current practice

Members of BSAC and HIS, with the knowledge of the Councils of each, have been discussing the issues surrounding the recent increase in infections with MDR Gram-negative bacteria in UK hospitals.

Following discussions and consideration of the forthcoming ARHAL report, we now believe it an appropriate time to set up a Joint Working Party to look at making authoritative recommendations both for treatment and prevention of transmission of these infections.

4. The guideline

The guideline development process is described on the NICE website. The scope defines what the guideline will and will not examine, and what the guideline developers will consider. The scope is based on the referral from the three societies.

4.1 Population

4.1.1 Groups that will be covered

- a) Adults
- b) Children over one month old
- c) Particular consideration given to patients aged 65 years and older, people at high risk of acquiring MDR bacteria such as those requiring care in hospital settings

4.1.2 Groups that will not be covered

- a) Cystic fibrosis
- b) Community outbreaks

4.2 Healthcare setting

- a) All settings in which National Health Service care is received

4.3 Clinical management

4.3.1 Key clinical issues that will be covered

- a) Consideration will be given to laboratory testing and susceptibility testing, although only screening and confirmatory tests available in a general microbiology laboratory and not those limited to reference laboratories.
- b) The use of antibiotic combinations in the therapy of infections will be considered, particularly oral combinations that can be used in the outpatient setting.
- c) Mainly infections in critical and non-critical care patients in secondary care. However, the same general principles would apply in community settings, particularly in areas where inappropriate treatment is encouraging selection.

4.3.2 Clinical issues that will not be covered

- a) Children younger than one month (neonates). This group has physiologically different needs and care is very specialized.
- b) People with cystic fibrosis who need specialized care.
- c) People who receive community health care in nursing homes.

4.4 Main outcomes

Outputs will be the production of guidelines, which will be approved via a process of national consultation. The intention is to inform and guide practice, but also to

highlight areas where more research is needed. The following will be produced and published as indicated:

- a) Current epidemiology and infection control issues – *Journal of Hospital Infection*.
- b) Therapeutic issues and antibiotic guidance for treating infections caused by MDR Gram-negative bacteria – *Journal of Antimicrobial Chemotherapy*.
- c) In addition, it is expected that each journal will carry a leading article or review article on the guidance that is published by the joint society.
- d) The Working Party will follow the SIGN process when developing guidance, including the hosting of a national stakeholder meeting as part of the national stakeholder consultation process.

4.5 Economic aspects

Developers will take into account both clinical effectiveness and cost-effectiveness when making recommendations involving a choice between alternative interventions.

4.6 Status

4.6.1 Scope

Final scope

4.6.2 Timing

The work will start in October 2011.

5. Patient representation and equality

Patient representatives are invited to all meetings and will be involved in the writing and drafting of the guidelines. As part of these discussions, potential impacts on equality of groups sharing protected characteristics are considered and incorporated into the guidelines. Health inequalities associated with socio-economic factors and with inequities in access for groups to health care and social care are considered and opportunities identified to improve health.
